

## **Kenandy to Announce New Innovations at Gartner Supply Chain Executive Conference**

*Innovations Include Real-Time General Ledger and Real-Time Traceability*

**REDWOOD CITY, CALIF.—May 13, 2014**—Kenandy, Inc., the leader in cloud ERP for the global enterprise, announced today that they will be showcasing some of their new innovations at the Gartner Supply Chain Executive Conference taking place in Phoenix, AZ May 20-22. Kenandy is one of the sponsors of the event, and will be presenting a session titled “Kenandy: Transformational Case Studies of the New Cloud, Mobile, Social Supply Chain.”

The Gartner Supply Chain Executive Conference is the premier annual gathering of supply chain leaders. The event provides an opportunity for chief supply chain officers and their leadership teams to attend sessions about the latest trends in supply chain excellence, and to engage with analysts. The Kenandy session, which takes place on May 20, will be led by Sandra Kurtzig, Kenandy Chairman and CEO, and John Wookey, Kenandy Board Member and Salesforce EVP of Social Applications. They will present case studies of companies that have transformed their businesses to move more quickly into new markets, adjust rapidly to changing customer preferences and empower people to work together more effectively.

The innovations that Kenandy will be showcasing include real-time general ledger and real-time traceability. Kenandy instantly creates and records detailed journal entries in the real-time general ledger when a business transaction occurs. Along with the appropriate accounting information, Kenandy captures all the underlying details of transactions, such as sales orders or purchase orders, in one central place. You can run consolidations anytime, for a subsidiary or enterprise. With the appropriate privileges, you can easily correct transaction errors and see the results with Kenandy’s instant replay functionality. The real-time visibility always lets you know how your business is doing, so you can make changes or react to new opportunities as they arise.

Inventory traceability is important for most product companies, especially businesses involved with the global life sciences and food. Kenandy keeps track of every component as it is combined, split apart or recombined to form work-in-progress and finished goods. The entire genealogy about your products, including who worked on them, when and how they were produced, tested and packaged, is recorded in real-time. The ability to get instant, global access to this kind of information is essential to managing your business and minimizing your risk.

“Kenandy is the ERP business platform for modern global enterprises,” says Sandra Kurtzig. “Kenandy’s architecture supports continuous real-time visibility into all aspects of your operations. The instant availability of data, along with Kenandy’s flexible reporting capabilities, give you the insights you need to know about your business today and plan for future innovations.”
